Tel: +1 617-909-9768, Email: [yifany@csail.mit.edu](mailto:yifany@csail.mit.edu), <https://yang-yifan.github.io/>

## INTERESTS & EXPERTISE

---

GPU, Deep Learning Inference, Low Latency Inference, Low latency kernels, LLM, Computer Architecture, Accelerator for Sparse and Irregular Applications, HW/SW Co-design, Domain-specific Accelerator, FPGA

## EDUCATION

---

**Massachusetts Institute of Technology, EECS**

Cambridge, MA

Ph.D. in Electrical Engineering and Computer Science

September 2019 - May 2024

- GPA: 5.0/5.0
- Thesis advisor: Prof. Daniel Sanchez and Prof. Joel Emer
- Thesis title: Effective and Flexible Acceleration of Sparse Computations

S.M. in Electrical Engineering and Computer Science

September 2019 - June 2021

- GPA: 5.0/5.0
- Thesis advisor: Prof. Daniel Sanchez and Prof. Joel Emer
- Thesis title: Architectural Support for Efficient Processing of Sparse and Irregular Applications
- Coursework: Computer System Architecture, Hardware Architecture for Deep Learning, TinyML and Efficient Deep Learning Computing, Advances in Computer Vision, Theory of Computation

**Tsinghua University, Department of Physics**

Beijing, China

B.S. in Mathematics and Physics

August 2015 - July 2019

- GPA: 3.90/4.00
- Thesis advisor: Prof. Leibo Liu
- Thesis title: A Message Passing-based Graph Processing Framework on CPU-FPGA Heterogeneous System

## INDUSTRY & TEACHING EXPERIENCE

---

**Senior Deep Learning Architect**

June 2024 - present

Deep Learning Inference Architecture, Nvidia

Santa Clara, CA

- Compute and memory locality optimization and programming model exploration of Blackwell/Rubin and future GPU architecture
- Low latency inference optimized Blackwell kernel authoring (CuTe/Triton)
  - GEMM and batched GEMM (open sourced in [FlashInfer](#))
  - Flash attention/decoding (will be open sourced soon)
  - (WIP) MoE layer
- TRT-LLM Llama/[DeepSeek R1](#)/[GPT-OSS](#) low latency inference optimization
- Prototyping/Exploring speculative decoding techniques for popular LLM models (e.g. [DeepSeek MTP](#))
- Memory layout optimization for improved kernel DRAM bandwidth efficiency (In production [TRTLLM-gen kernels](#))
- Performance exploration of using prefetching for low latency LLM inference
- Hardware feature exploration for low latency LLM inference in future GPU architectures

- Developing tools for better silicon performance observability of low latency LLM workloads on GPUs

### Platform Architecture Intern

Platform Architecture, Apple

May 2022 - August 2022  
Cupertino, CA

- CPU cache subsystem performance research

### Graduate Teaching Assistant

6.812/6.825 *Hardware Architecture for Deep Learning*, MIT

January 2022 - May 2022  
Cambridge, MA

- Held recitations and office hours
- Developed and graded lab assignments and paper review sessions
- Mentored and graded final design projects

## RESEARCH EXPERIENCE

---

### Graduate Research Assistant

MIT Computer Science and Artificial Intelligence Laboratory

September 2019 - May 2024  
Cambridge, MA

- Advisor: Prof. Daniel Sanchez and Prof. Joel Emer
- Worked on a unified accelerator to accelerate matrix multiplication at all sparsity levels

Conduct performance analysis (C/PyTorch) of matrix multiplication on a broad set of application domains and sparsity levels (transformer, CNN, tensor algebra, graph analytics scientific computing, etc.)

Codesign dataflow and hardware architecture to efficiently support dense, mildly sparse, and highly sparse matrix multiplication with modest area overhead (evaluated using Verilog)

Evaluated the accelerator on a wide range of sparse levels and application domains, results show large perf/area gains over state-of-the-art accelerators

- Worked on leveraging inter-layer pipelining to accelerate sparse CNNs

Proposed input-stationary output-stationary (IS-OS) dataflow that minimizes inter-layer storage requirement

Designed the **ISOSceles** accelerator that implements IS-OS dataflow to efficiently pipeline multiple sparse layers in CNNs

Conducted end-to-end C++ simulation evaluation of ISOSceles on several sparse CNNs and achieved large speedup and off-chip traffic reduction over state-of-the-art accelerators

- Worked on offering architectural support to accelerate irregular applications using data compression

Designed **SpZip**, specialized hardware support for traversing and generating compressed data structures in irregular applications

Proposed the Dataflow Configuration Language (DCL) for the SpZip programmable hardware

Evaluated SpZip using zsim simulation on a broad set of irregular applications, results show large performance gains and data movement reductions over prior systems

### Undergraduate Research Assistant

Research Center for Mobile Computing, Tsinghua University

March 2017 - August 2019  
Beijing, China

- Advisor: Prof. Leibo Liu
- Worked on designing graph processing framework across the hardware software interface

Proposed the asynchronous Block Coordinate Descent (BCD) view of iterative graph algorithms to reveal the algorithmic and system trade-offs on achieving fast algorithm convergence

Designed **GraphABCD**, an asynchronous graph processing framework on heterogeneous system

Prototyped GraphABCD whole system in Verilog on Intel HARPv2 CPU-FPGA heterogeneous platform

### Undergraduate Research Assistant

Berkeley Artificial Intelligence Research Lab (BAIR), UC Berkeley

July 2018 - September 2018  
Berkeley, CA

- Advisor: Prof. Kurt Keutzer, collaboration with Kees Visser and Michaela Blott from Xilinx Research Labs
- Worked on co-designing Convolutional Neural Network and its hardware accelerator

Designed **DiracDeltaNet** using PyTorch, a hardware efficient neural network targeting image classification task

Quantized DiracDeltaNet down to 4bit weight and 4bit activations with minor accuracy loss

Designed and implemented **Synetgy**: the hardware accelerator for DiracDeltaNet on embedded FPGA using HLS

| • Zhang Mingwei Scholarship (10%)                                                                                                                               | Beijing, 2016   |
| • Bronze Medal in the 31 <sup>st</sup> China Physics Olympiad                                                                                                   | Hangzhou, 2014  |

## **TECHNICAL SKILLS**

---

**Programming:** CUDA, CUTLASS/CUTE, Triton, C/C++, Python, Verilog, System Verilog, Vivado HLS, Unix/Linux, Golang, R, MATLAB, Assembly

**Tools:** Pytorch, Nvidia toolchain (Nsys, NCU), Intel Pin, zsim, Intel(Altera) toolchain (Quartus, Qsys), Xilinx toolchain (Vivado, Vivado HLS, PYNQ), Modelsim, VCS
